

DELIVERABLE 2 · USER JOURNEYS

Atlas Marketplace

Buyer and seller flows for a secondary market in LP interests in private equity funds – from discovery to a completed transfer, with the decision points and the paths where a deal legitimately ends without closing.

CANDIDATE

Samyukth Kalathil

ROLE

Intern, Technology · Greenstone

SUBMITTED

1 October 2026

PROTOTYPE

13 screens · two workspaces

Six stages, and why one of them is separate

Each stage answers one question. The stage that matters most is **ASK** – in a private deal, price is not set at the bidding stage. It is set by what a buyer learns about a stale NAV while questioning the seller.

Why ASK is a stage and not a feature

Folding questions into diligence hides the step where value is really established – and hides the fairness rule that every answer goes to every qualified buyer at once. If one bidder learns something material in a private email, the process becomes indefensible.

Three lanes, six stages

Process step Decision point Exception outcome

Atlas is the only participant present in all six stages

Seller journey — the LP exiting

A family office rebalancing a mature commitment. Six steps, two real decisions.

1

Create the opportunity

Fund details, NAV, unfunded commitment, ownership, timing.

?

Is the interest transferable?

Atlas reads the LPA, identifies consent and ROFR provisions, and issues a written legal opinion.

NO – process stops. Nothing is marketed

3

Approve the anonymous teaser

And approve the buyer shortlist. The seller keeps control of their own distribution list.

4

Answer the logged Q&A

Once, to all qualified buyers at the same time, within a one-business-day SLA.

?

Is there a bid worth accepting?

Compare economics *and* execution certainty side by side.

NO – reprice and reopen, or withdraw

6

Sign and settle

Through compliance, GP consent and escrow. Proceeds on the agreed date.

Buyer journey — the secondaries fund

A specialist buyer with a mandate. Three gates before it can even see the fund.

- 1

Discover matched opportunities
Curated by mandate, never an open search – a catalogue would leak seller intent.
-
- ?

Am I qualified, and do I accept the NDA?
KYC/AML clearance, then a binding NDA before the fund identity is released.

NO – denied, or no data room access
-
- 3

Diligence the position
Capital account statement, quarterly report, LPA, portfolio detail, and the counterparty's profile.

- 4

Ask and challenge
Questions go to every qualified buyer at once. Valuation challenges are logged against specific NAV components.
-
- ?

Is my price and structure competitive?
A structured bid: price, payment, conditions, unfunded treatment, timing.

NO – withdraw; recorded on the buyer's profile
-
- 6

Sign and settle
Deposit, confirmatory diligence, then assume the commitment including its unfunded obligation.

Atlas journey — the operating model

Atlas is the only participant present in all six stages. That is the commercial argument for a venue existing at all.

DECISION POINTS

What each side is actually deciding

DECISION	THE QUESTION	WHAT INFORMS IT	IF NO
Transferable? SELLER	Can this interest legally change hands?	LPA transfer provisions, GP consent rights, right of first refusal, side letters	Process stops – nothing marketed
Qualified? BUYER	Is this counterparty permitted to see the deal?	KYC/AML, professional-client status, mandate fit, cheque size	Denied – no fund identity revealed
NDA signed? BUYER	Is it worth deeper diligence?	Teaser quality, the seller's verified position and process record	No data room access
Qualifying bid? BUYER	Do we bid, and on what terms?	Data room, NAV evidence, visible demand, internal approvals	Out – honest pass is recorded
Worth accepting? SELLER	Is any bid better than holding?	Price % of NAV, payment structure, conditions, close speed, certainty score	Reprice and reopen, or withdraw
Compliance cleared? ATLAS	Are both sides clean to transact?	KYC, AML, sanctions, source of funds	Pause – nothing continues
GP consent? GP	Will the manager permit the transfer?	LPA terms, transferee eligibility, ROFR window outcome	Next shortlisted bidder

Four ways a process legitimately ends

In this asset class a meaningful share of processes do not close. A journey that only shows the happy path is not describing the market – it is describing a mock-up.

NO · STOP

Transferability fails

A blocking restriction in the LPA prevents the transfer. Atlas stops before marketing and no buyer is ever approached – which protects the seller's confidentiality and Atlas's credibility.

NO · DENY / NO ACCESS

The buyer is not qualified, or will not sign

Excluded at KYC, or held outside the data room until the NDA is countersigned. Identity and fund economics are released progressively, never by default.

NO · OUT

No qualifying bid

Nobody bids, or every bid sits below the seller's expectation. The seller reprices and reopens, or withdraws. An honest pass is recorded and useful signal.

NO · PAUSE / NO · NEXT BIDDER

Compliance fails, or the GP declines

A compliance exception freezes the entire process. A GP rejection does not collapse the deal – Atlas reconfirms the next shortlisted bidder and restarts consent, because consent is the most common reason a signed deal dies.

The design principle

Exception paths stop, pause or advance to the next bidder. They never loop back silently and they are never left in someone's inbox.

Fifteen states, one owner each

Every screen in the prototype is bound to one of these states. The seller always knows where the process stands and what happens next.

NON-FAILURE TERMINALS

Three states end the process without anything going wrong: **the seller withdraws, no bid qualifies**, and **the ROFR is exercised** by another LP. The prototype shows all three rather than pretending every listing closes.

HARD STOP

State 11 is the only true freeze. A compliance exception halts documentation and settlement entirely – it is not a warning, and progress does not resume until it clears.

ILLUSTRATIVE

One commitment, end to end

The happy path for a single interest, as shown in the prototype. Timings are illustrative.

DAY	SELLER (LP)	BUYER	ATLAS
0	Creates the opportunity	Mandate already live	Verifies the position, reviews the LPA
2	Approves the anonymous teaser	Sees it as a matched opportunity	Confirms transferable; matches and invites
4	Grants data room access	Signs the NDA; identity released	Logs qualification and NDA
5-12	Answers Q&A once, to all buyers	Diligences the position; challenges a NAV input	Brokers Q&A; tracks document activity
14	Reviews indicative bids	Submits an indicative bid	Runs the sealed first round
21	Shortlists two of three	Final bid after full diligence	Normalises bids; runs the final round
24	Selects 92.5% over 93.0%	Selected on certainty	Opens compliance
28-58	Signs and receives proceeds	Deposits and assumes the interest	Compliance, GP consent, ROFR, settlement

SEE IT RUNNING

The journeys are implemented, not just drawn

Thirteen screens across two switchable workspaces. The sidebar switches between the seller's view and the buyer's, and the journey map highlights the lane you are in.

samm12331231.github.io/atlas-marketplace

01 Journey map – the whole model on one page

03 Buyer profile – toggle *Before NDA* to see masking

05 Compare bids – certainty beats headline price

02 Transferability – click *Simulate failed review* for the hard stop

04 Seller profile – the same rule, seen from the buyer's side

06 Closing – Scenario controls: pause compliance, or reject GP consent
